

AINS HACKATHON 2026

OfficeHours.ai

Office hours for founders, on demand.

An AI advisory platform that diagnoses where a startup actually stands — and tells it what to do next.

— THE TEAM

The Jew, the Sad & the Buggy.

Building OfficeHours.ai for the AINS Hackathon 2026.

— THE PROBLEM

Tunisian founders are better at pitching than at building.

Strong decks attract praise. Praise feeds confirmation bias and a chase for vanity metrics — so founders mistake momentum for progress and double down on the wrong things.

1,000+

startups labeled under the Startup Act

<10

meet VC standards of success

— WHO IT'S FOR

The people who need honest guidance most.

- **Early- and growth-stage founders** in Tunisia & MENA — pre-seed to early revenue.
- **Aspiring founders & students** who want to learn entrepreneurship by doing.
- **Incubators & programs** that need to advise more founders than their mentors can cover.

— THE CONCEPT

Real office hours — with specialist Advisors.

- A founder books a session with an **Advisor** — Product, Go-to-Market, Fundraising, Pitch — and pitches their startup.
- Each Advisor is an AI agent that reasons from the company's **Dossier**: its **Data Room** (deck, BP, financials), its history, and its current **Signals**.
- Sessions produce **Action Items**, tracked in the **Logbook** and carried into the next session as context.

— HOW IT WORKS

Pitch. Get feedback. Earn the next room.

- 1 Founder starts a session and **pitches the Advisor**. Materials upload up front, later, or mid-conversation.
- 2 The Advisor probes and gives feedback. **Takeaways, Action Items, and Signals are recorded and monitored.**
- 3 **Advisors unlock as the startup earns it** — you start with the Product Advisor; Go-to-Market stays locked until the problem is validated.
- 4 Founder works the items; the **Logbook** tracks progress; **Signals re-evaluate after each session.**

Every Advisor runs the same four-step engine.

STEP 01

Read

Ingests the Dossier — deck, business plan, financials, and past sessions.

STEP 02

Diagnose

Places the startup at a maturity stage, tied to the evidence behind it.

STEP 03

Score

Computes the Signals across weighted criteria, with a per-criterion breakdown.

STEP 04

Orient

Turns each gap into an Action Item matched to a real program, with the source attached.

Advisors draw on admin-managed **Playbooks** and a catalogue of national & international support and financing programs.

— THE JOURNEY

From idea to scale, one gate at a time.

To move up a phase, a startup passes a **Stage-Gate Review** where its Signals have to clear the gate's criteria.

— THE SCORING MODEL

Signals, built on the stress-test framework.

Desirability.

- Problem-fit defined
- Customer validation
- Market size & competition

Feasibility.

- Tech score
- Product readiness
- Scalability & manual dependency

Viability.

- Revenue model & pricing
- Unit economics
- Sustainability & SDG alignment

When a fundamental dimension scores low, it caps the whole result. Strong scores elsewhere cannot lift it back up.

Thank you.
